## Abstract

The emergence of Covid-19 has made various activities such as economics, politics to education experience setbacks. Therefore, different countries that are feeling the impact of the Covid-19 pandemic immediately take multiple ways to overcome this problem. The transparency of policies made by the government has a critical role in providing effective decision-making in creating policies to overcome the Covid-19 pandemic. This research then aims to see how public policy transparency can help overcome the Covid-19 pandemic. In the discussion, this study will look at various countries that implement public policy transparency when facing a pandemic, so the Indonesian state can later learn. This research will be carried out using a qualitative approach with a comparative study method. The results of this study found that transparency in the governance system during Covid-19 will be the key to the success of this pandemic problem. Through this openness, the accuracy of mobilization and coordination from the government will result in good public participation so that, in the end, public policies can be implemented effectively.

## A. INTRODUCTION

A pandemic is the spread of a disease or epidemic that moves across countries and is a large-scale epidemic. Black Death, Spanish Flu, Asian Flu, Hong Kong Flu, HIV/AIDS, Smallpox, cholera, Dengue Fever, Severe Acute Respiratory Syndrome (SARS), Middle East Respiratory Syndrome (MERS), Avian Influenza (H7N9), Swine Flu (H1N1), Ebola, Zika, are a series of cases due to viruses that have attacked throughout the history of epidemic and pandemic cases in

the world. In 2020, more than 160 countries around the globe were devastated due to the impact of the COVID-19 pandemic, which significantly affected economic activity, education, and even society (Mercer, 2021).

The dilemma of various countries in the world in tackling the Corona Virus Disease-19 (COVID-19) Pandemic has become a concern between one country and another. Government transparency is a guide during this epidemic that attacks the core human respiratory system (Hamza &
