Introduction

Background

Blood is one of the most important components present in the body, given its function as a means of transportation. Lack of blood in the body can spur a number of diseases ranging from anemia, hypotension, heart attack, and several other diseases. Some other cases such as accidents and childbirth are also causes of a person experiencing a lack of blood due to heavy bleeding. This condition certainly requires relevant agencies, such as PMI and hospitals, to always have an adequate blood supply. But ironically it is not uncommon for us to find cases of lack of blood bags in hospitals while the need for blood continues to increase. To show our concern, we UNIVERSITAS MUHAMMADIYAH JAKARTA in collaboration with PMI intend to organize Blood Donation activities and health checks.

Activity Objectives

General Purpose:

This activity is an effort to socialize blood donation among the community.

Specific Objectives:

- Increase blood supply
- Increasing public awareness to be willing and able to carry out this social activity to people who need blood

Forms of Activity

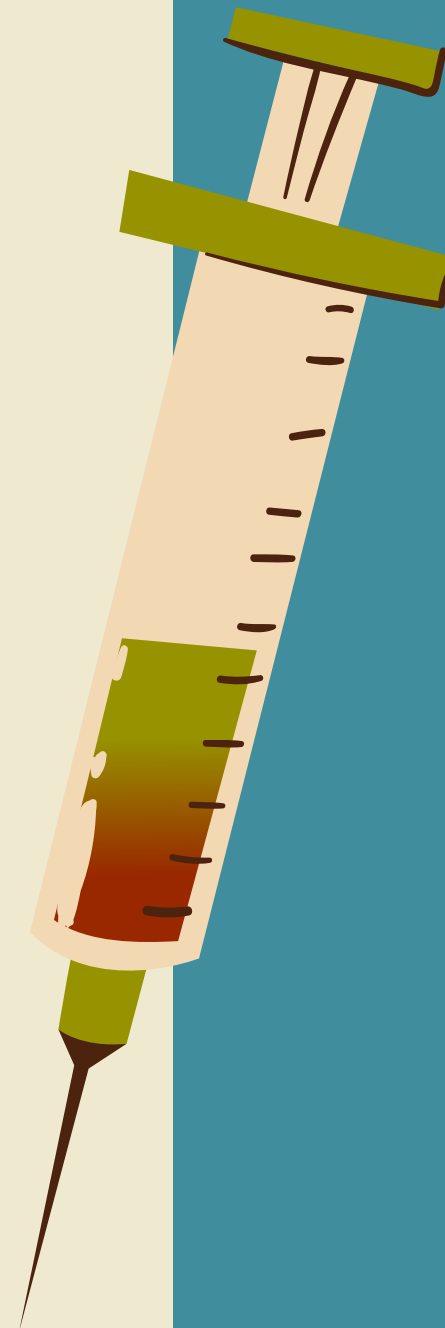

This form of blood donation and health check-up activities is open to the public, especially the community around Tangsel.

Activity Objectives

The targets of blood donation activities are as follows:

- Elements of the Guiding Council, Leadership Elements, Academic Community, Academic Implementers, Administrative Implementing Elements, and Supporting Elements at the University of Muhammadiyah Jakarta.
- Tangsel Society.
- Indonesian Red Cross (PMI)

Out Put

- The emergence of an attitude of mutual care and sharing among the people of Tangsel in particular and the extended family of UMJ in general.
 - The fulfillment of blood stock needs at the Indonesian Red Cross (PMI).
 - The emergence of public awareness of the importance of getting their health checked as early as possible.
- 

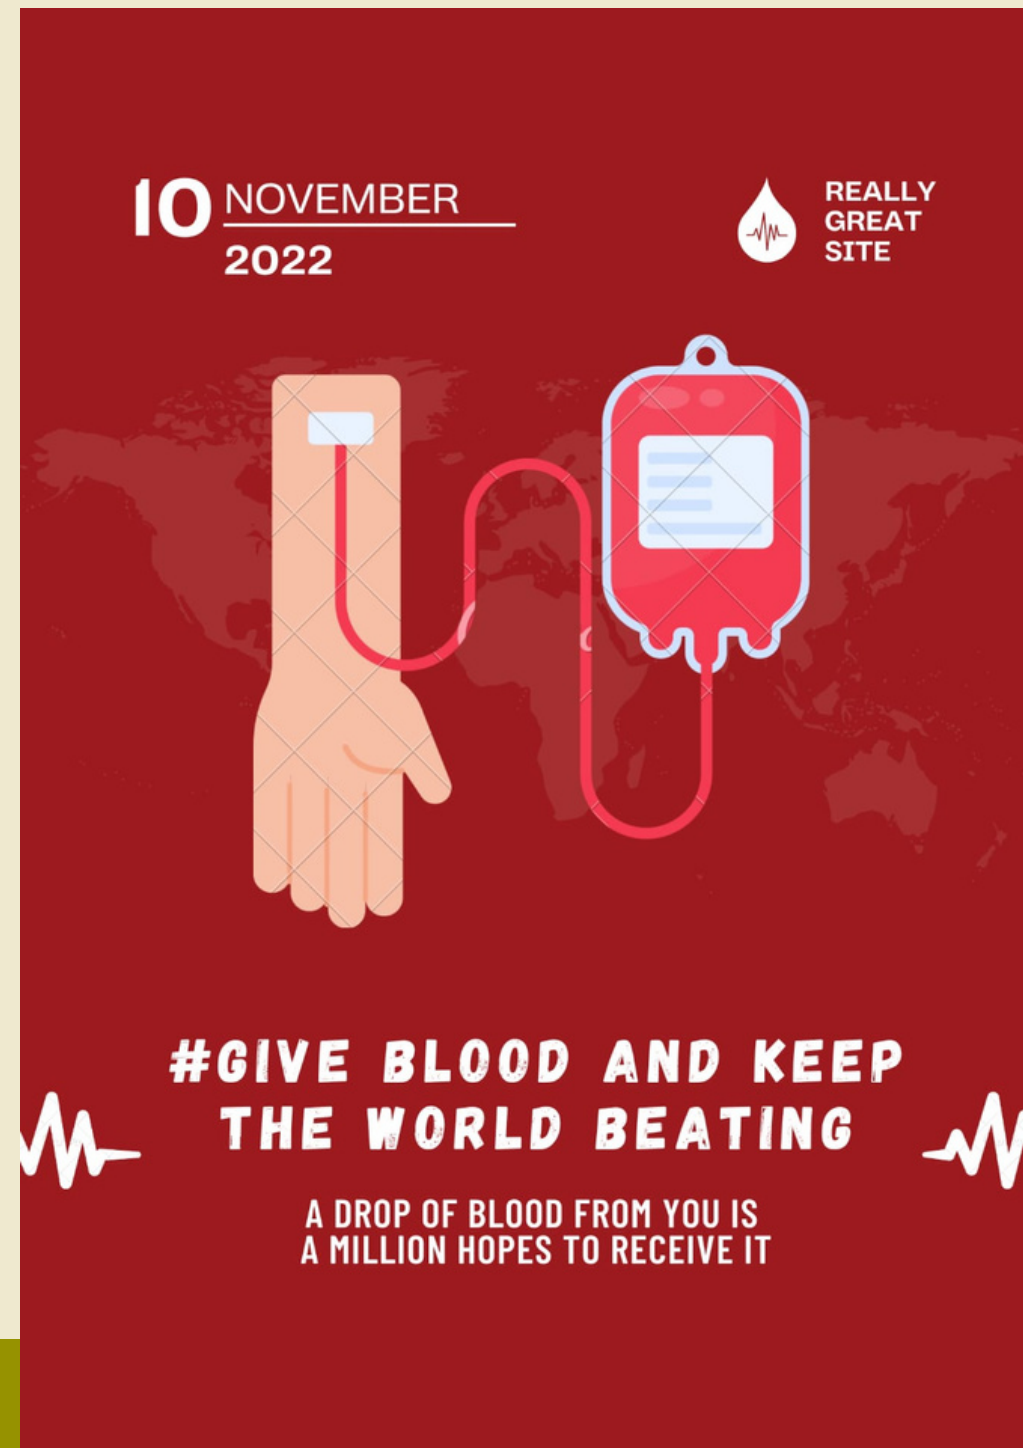

Activity Basis

- The Tri Dharma of Higher Education
- Communication Science Student Activity Program FISIP
UMJ
